

The Valve introduces the 105 "Bimbo" 5W stack and combos.

"The Hottest 5 Watts You Ever Plugged Into!!"

A growing number of guitarists living in small homes or **apartments** and/or work in smaller sized recording **studios**, needing great tube amp tone at lower volumes all over the world, have been asking the same question...

"Why don't any of the big amplifier companies make a small tube amp that actually sounds good?"

THE VALVE designed a smaller 100% tube amplifier to finally give guitarists the world over the product they have been asking for...

Early 1970 **full blast** stack-like tone at **bedroom** levels!

Even 15 and 18 watts amps are too loud to play at home...

Tube amps generally sound best when the power section is pushed into **clipping**. But this involves high volumes.

The **105** model delivers **5W** and incorporates **Power Scaling**, a special attenuation volume which allows to achieve the same tone as our loud sound but at a much lower volume, for cranked amp tone and distortion at **bedroom levels**.

Specifications

Origin: hand crafted in Italy
 Type: all tube, available Stack or Combo
 Power: 5W down to 1/20 W
 Tubes: 1 x JJ Tesla E34L, 1 x ECC83, 1 x 12AX7B
 Controls: Gain, Tone, Volume, Attenuation
 Output impedance: 4/8/16 ohms
 Speakers: Celestion G12T-75 on 12" combo and cab
 Celestion Tube 10 on 10" combo
 Options: available in black, red or cream brown cover
